

KASANAI

C A R E

& Mounting Guide

Thank you for choosing KASANAI. Each piece is handcrafted with precision and care, designed to offer enduring beauty and function. Please take a moment to read the chapitre that belongs to your piece, so it remains in perfect condition for generations.

CHAPITRE I
Mineral Earth

CHAPITRE II
Stainless Steel

CHAPITRE III
Le Laqué

CHAPITRE I

Mineral Earth

Micro mortar & microtopping

SPECIAL CHARACTERISTICS

Each KASANAI table is a work of art, created from multiple hand applied layers of mineral micro mortar. Slight variations in colour, shape and dimensions are normal, as are small surface imperfections. They are characteristic of the handmade nature of each unique piece.

NORMAL USAGE

For indoor use only, unless explicitly stated otherwise by KASANAI. Microtopping is strong yet delicate, and should be treated with care, like natural stone.

- Avoid sharp objects directly on the surface.
- Swiftly remove spilled liquids, especially coloured ones.
- Never place hot objects, such as cooking pans, directly on the table.
- Extreme cold, heat and dry conditions may affect the texture.
- Avoid limescale removers and corrosive cleaning products.
- Always lift the table when moving it; never drag it.

PROTECTIVE COATING

KASANAI applies multiple layers of protective coating to ensure longevity and enhance the natural beauty of your table. As with natural stone, it remains essential to protect the surface from stains.

MOUNTING

Unpack your table on a soft, cushioned surface. Depending on your location, it arrives in a wooden crate or packed with edge protectors and bubble wrap. Six bolts and a hex key are included. Position the leg first, then gently lift the tabletop onto it. Never slide it into place, as this can damage the underside. Once aligned, place the bolts and tighten them with the hex key.

MAINTENANCE

Avoid acidic or abrasive cleaners and products that leave residue, as they can damage the protective layer.

DAILY · CRYSTAL CLEAN AKEMI

Ready to use. Shake the bottle and open the spray nozzle. Mist the spray evenly over the surface, then wipe with a clean, absorbent microfibre cloth.

OCCASIONALLY · HYDRO DEFENCE IDEAL WORK

A nourishing, water repellent treatment. Shake before use, apply with a cloth, brush or roller, and remove residue with a clean cloth after 10 minutes.

CHAPITRE II

Stainless Steel

Type 304 steel

SPECIAL CHARACTERISTICS

Each piece is crafted from type 304 stainless steel and finished by hand with a vibrated surface. This soft, satin texture diffuses light and helps disguise fine marks. Over time, light signs of use blend into a quiet patina, part of the character of the material.

NORMAL USAGE

Our stainless steel pieces are intended for indoor use, unless explicitly stated otherwise by KASANAI.

- Use felt pads or coasters under ceramics, stone and metal objects.
- Never place hot pans directly on the surface; intense heat can discolour steel.
- Promptly wipe away salt, vinegar, citrus, wine and other acidic spills.
- Never use steel wool, scouring pads, abrasive powders, bleach or chlorine based cleaners, as they can cause scratches and rust spots.
- Always lift the table when moving it; never drag it.

MOUNTING

Stainless steel is heavy: always unpack and lift your piece with at least two people, on a soft, clean surface. The bolts and hex key are delivered in a separate pouch. Position the table, insert the bolts and tighten them with the hex key. Finally, check that the table stands level.

DAILY MAINTENANCE

Clean with a little glass cleaner on a soft microfibre cloth, using gentle circular movements. It removes fingerprints and everyday marks without leaving streaks. Wipe dry with a clean cloth.

ADDITIONAL MAINTENANCE

For a deeper clean, apply a thin film of WD40 or a stainless steel cleaner over the whole surface, then buff with a clean microfibre cloth in small circular movements. Should light weld marks appear, a slightly darker brownish tint, they can be removed with a stainless steel cleaner.

CHAPITRE III
Le Laqué

High gloss lacquer

SPECIAL CHARACTERISTICS

Le Laqué is finished in multiple layers of high gloss lacquer for a deep, mirror like sheen. This glass like finish reflects every nuance of light, and also reveals dust and fingerprints, which is natural to high gloss lacquer.

NORMAL USAGE

Our lacquered pieces are intended for indoor use only.

- Keep away from direct sunlight, radiators and other heat sources.
- Use coasters and felt pads; never place hot or wet objects directly on the surface.
- Keep alcohol, perfume, nail polish remover and other solvents away from the lacquer.
- Wipe spills immediately.

MOUNTING

Unpack on a soft, clean surface, ideally wearing cotton gloves. Lift the piece by its body, never by its edges, and never drag it.

DAILY MAINTENANCE

Dust with a soft, dry microfibre cloth. For fingerprints, spray a little ammonia free glass cleaner onto the cloth, never directly onto the lacquer, and buff dry. Avoid abrasive cleaners, wax and silicone.

ADDITIONAL MAINTENANCE

Fine surface marks can be refreshed with a non abrasive high gloss lacquer polish. For deeper marks, please contact us.

With proper care, your KASANAI piece will continue to bring joy for generations to come.
